SUSTAINABLE ENERGY FOR ALL

ELECTRICITY ACCESS

ASSESS THE SITUATION

Decision Tree

Does an up-to-date National Electrification Strategy/Plan (NES/NEP) exist?

Yes

Are mini-grids and stand-alone systems integrated in the National Electrification Strategy/Plan (NES/NEP)?

Yes

Review policy and regulatory framework to reflect NES

Mini-grid

- Determine mini-grid operator and ownership model
  - Utility operator model
  - Private operator model
  - Community operator model
  - Hybrid operator model
- Establish mini-grid policy instruments and regulations
  - Establish regulatory framework reflecting mini-grids operator models
  - Licensing, permitting, concession and contractual regulation
  - Definition of mini-grid tariff structures
  - Technical standards, quality of service regulations and reporting mechanisms
  - Environmental policy, regulation and standards
  - Regulations for interconnection with the national grid
- Financing mini-grids
  - Public funding for mini grids
  - Private funding for mini grids
- Strategies for community engagement and the promotion of productive use of electricity
- Capacity development for mini-grids
- Strategies for mainstreaming gender in mini-grids

No

Carry out Integrated Electrification Planning (IEP)

- Define electricity access levels using the multi-tier framework (MTF)
- Establish a coordinating body empowered with high-level political buy-in
- Engage experts and relevant stakeholders
- Collect data and use tools (e.g. GIS) to support electrification planning
- Define areas best reached by grid extension and densification
- Identify areas best reached by mini-grids and stand-alone systems

Standalone Systems

- Collaborate with the private sector to promote off-grid electrification
- Consumer protection and technical quality standards
- Introduce fiscal incentives
- Promote private investment
- Promote local capacity building for deployment, installation and maintenance
- Launch public information and awareness campaigns
- Promote the development of local supply chains
- Promote repair and recycling infrastructure and regulations

No

Develop or update National Electrification Strategy or Plan (NES/NEP)
