SUSTAINABLE ENERGY FOR ALL

SUSTAINABLE COOLING

ASSESS THE SITUATION

Decision Tree

Is access to cooling addressed in the national energy (efficiency) policy or strategy?

- **Yes** → **Is there a cooling strategy / action plan?**
  - **Yes** → **Review enabling framework for thematic areas related to access to cooling**
    - Thermal comfort and safety
      - Regulation
        - Building codes and design
        - City zoning and planning
        - Products & equipment standards and testing
      - Information
        - Data collection & research
        - Skills development
        - Awareness raising
      - Incentives
        - Financial incentives
        - Non-Financial incentives
    - Food & agricultural cold chains
      - Regulation
        - Process / cold chain
        - Equipment / refrigeration
        - On-grid / weak grid
        - Off-grid
        - Mobile
      - Information
        - Data collection & research
        - Skills development
        - Awareness raising
      - Incentives
        - Financial incentives
        - Non-Financial incentives
    - Healthcare and medical cold chains
      - Regulation
        - Process / cold chain
        - Equipment / refrigeration
        - On-grid / Off-grid / Mobile
      - Information
        - Data collection & research
        - Skills development & Awareness raising
      - Incentives
  - **No** → **Develop a cooling strategy / action plan (sub-national, national or regional)**
    - Map the cooling landscape, stakeholders and institutional settings
    - Assess sector-specific, current and future cooling demand, collect and analyse data on cooling access, energy use and emission
    - Set targets and identify solutions for each sector
    - Identify cross-sectoral synergies and formulate a NCAP or similar integrated plan
    - Facilitate multi-stakeholder collaboration
- **No** → **Review national energy policy or strategy to include cooling as a key component**
