SUSTAINABLE ENERGY FOR ALL

Clean Cooking

ASSESS THE SITUATION
Decision Tree

Is Clean Cooking featured in targets/priorities of the National Energy Policy / Strategy or Nationally Determined Contributions (NDC)?

- Yes
- No

Review National Energy Policy / Strategy or NDC to reflect realistic targets on clean cooking

Is there an integrated national or regional plan or strategy to scale up access to clean cooking solutions?

- Yes
- No

Carry out Integrated Energy Planning (IEP) on Clean Cooking

- Understand impacts and cross-sectorial linkages of cooking on other areas
- Understand access levels for domestic, productive and institutional cooking, e.g., by using the multi-tier framework (MTF)
- Coordinate with ministries and authorities (e.g, energy, climate change, agriculture, forestry, health)
- Engage relevant non-governmental stakeholders in planning
- Collect data on clean cooking access and adoption, taking into account geographical (urban/rural) and demographical considerations
- Analyse the sustainability of the biomass used for cooking in the country
- Analyse usage, availability and potential of alternative clean cooking fuels and technologies in the country

Review enabling framework for implementing clean cooking plan / strategy

Policy and institutional framework

- Set clean cooking policy targets
- Integrate gender across policies, institutional framework, and implementation
- Policy implementation for relevant fuels and technologies
  - Improved / Advanced Biomass Cookstoves
  - Modern biofuels (e.g., biogas, ethanol)
  - LPG & LNG
  - Electric cooking
- Establish institutional framework
  - Define & operationalise focal point for clean cooking at executive level
  - Define agencies responsible for setting and enforcing standards, and tracking access and adoption of clean cooking
- Monitor progress on access to clean cooking and impacts

Regulations and Standards

- Set up regulatory framework
- Set efficiency, emissions and safety standards for different cooking fuels
  - Improved / Advanced Biomass Cookstoves
  - Modern biofuels (e.g., biogas, ethanol)
  - LPG & LNG
  - Electric cooking
- Establish monitoring and verification schemes as well as field testing of clean cooking standards
- Adopt labelling schemes on clean cooking products

Market development and financing

- Review existing subsidies and their efficiency
- Establish fiscal incentives (tax/subidies)
- Establish end-user payment models
- Promote private investment
- International finance mobilisation
- Promote local value chain development
  - Assess potential for job creation and women empowerment
  - Improve local manufacturing capacities
  - Establish last mile distribution mechanisms for clean cooking fuels

Awareness raising

- Develop inclusive awareness rasing strategy for clean cooking solutions
- Implement awareness campaigns in collaboration with local community organisations
  - Improved / Advanced Biomass Cookstoves
  - Modern biofuels (e.g., biogas, ethanol)
  - LPG & LNG
  - Electric cooking
