SUSTAINABLE ENERGY FOR ALL

Energy Efficiency

ASSESS THE SITUATION

Decision Tree

Is there an up-to-date national energy efficiency policy or strategy?

- **Yes** → **Has energy efficiency been analyzed and modelled across relevant sectors (buildings, industry transport etc.)?**
  - **Yes** → **Review enabling framework and energy efficiency policy approaches by sectors**
    - **Buildings**
      - Regulations
        - Mandatory Codes for existing buildings
        - Mandatory Codes for new buildings
        - Mandatory Standards
      - Information
        - Voluntary building codes and guidelines
        - Energy performance labels & Certifications e.g. BREEAM, LEED
        - Capacity building & skills development
        - Institutional strengthening
      - Incentive
        - Financial incentives
        - Non-Financial incentives
    - **Industry**
      - Regulations
        - Mandatory energy performance
        - Mandatory standards
      - Information
        - Energy management e.g. ISO 50001
        - Measurement and verification
        - Capacity building & skills development
        - Awareness raising
        - Institutional strengthening
      - Incentive
        - Financial incentives
        - Non-Financial incentives
    - **Transport/Mobility**
      - Regulations
        - Fuel economy standards
        - Mandatory testing and verification
        - Zoning and standards
      - Information
        - Fuel economy label
        - Reporting system to track transport efficiency metrics
        - Capacity building & skills development
        - Institutional strengthening
      - Incentive
        - Financial incentives
        - Non-Financial incentives
    - **Products/Appliances**
      - Regulations
        - Minimum Energy Performance Standards (MEPS)
        - Mandatory testing and verification
        - Public procurement standards
      - Information
        - High energy performance standards (e.g., top 10, energy star)
        - Performance labels
        - Capacity building & skills development
        - Institutional strengthening
      - Incentive
        - Financial incentives
        - Non-Financial incentives
    - **Utilities & Energy efficiency services**
      - Regulations
        - Energy Efficiency Resource Standards
      - Information
        - Energy Efficiency in generation
        - District Energy
        - Energy Efficiency in transmission and distribution networks
        - Demand-side management/demand-response programs
        - Energy Efficiency in water & sanitation
        - ESCO/Super-ESCO
      - Incentive
        - Financial incentives
        - Non-Financial incentives
    - **Energy efficiency services**
      - Regulations
        - Energy efficiency services regulation
      - Information
        - Bulk procurement
      - Incentive
        - Financial incentives
        - Non-Financial incentives
  - **No** → **Carry out Integrated Energy Planning (IEP)**
    - Analyse energy consumption patterns across all sectors
    - Coordinate with ministries and authorities from various sectors (energy, industry, environment, climate change etc.)
    - Assign governmental and/or independent energy efficiency entity
    - Engage relevant non-governmental stakeholders in planning
    - Collect data and use tools to improve energy efficiency planning
    - Estimate potential of energy savings in each sector
    - Set targets on energy efficiency for priority sectors
- **No** → **Develop / review national energy efficiency policy/strategy**
